|  |         |            |              |
|--|---------|------------|--------------|
| Microsoft Excel Visual Basic   |         |            |              |
| File   | Edit    | Bookmark   | Options Help |
| Help Topics  |         | Back       | Options      |
| <b>Workbooks Method</b>  |         |            |              |
| See Also   | Example | Applies To |              |
| <p>Accessor. Returns an object that represents a single open workbook (a <b>Workbook</b> object, Syntax 1) or a collection of all open workbooks (the <b>Workbooks</b> object, Syntax 2). Read-only.</p>   |         |            |              |
| <p><b>Syntax 1</b><br/> <i>object</i>.<b>Workbooks(index)</b></p>  |         |            |              |
| <p><b>Syntax 2</b><br/> <i>object</i>.<b>Workbooks</b><br/> <i>object</i></p>  |         |            |              |
| Optional. The <b>Application</b> object.   |         |            |              |
| <b>index</b>   |         |            |              |
| Required for Syntax 1. The name or number of the workbook.   |         |            |              |
| <b>Remarks</b>   |         |            |              |
| <p>The collection returned by syntax 2 of the <b>Workbooks</b> method does not include open add-ins, which are a special kind of hidden workbook.</p> <p>You can, however, return a single open add-in if you know the filename. For example <b>Workbooks ("OSCAR.XLA")</b> will return the open add-in named "OSCAR.XLA" as a <b>Workbook</b> object.</p> |         |            |              |
